ACCESSORIES	

The legendary Omega Speedmaster was part of all six moon missions, and represents the spirit of adventure and pioneering spirit of the Omega brand.

The Omega Speedmaster Professional 'Moonwatch' was launched in 2014 as the successor to the popular Speedmaster Reference 3570.50.00. The timepiece features a black dial with Hesalite crystal, a small seconds dial, a 30-minute counter and a 12-hour

counter, as well as a central chronograph hand. The black bezel, featuring a tachymeter scale, is mounted on a 42 mm stainless steel case and is complemented by a matching steel bracelet. Internally, the timepiece is equipped with the mechanical calibre 1861, a successor to the renowned hand-wound movement previously worn on the moon. The watch is presented in a special Moonwatch box, accompanied by a NATO strap, an astronaut strap, a tool for changing the strap, and a book about the adventures of the Speedmaster.
